How WELDING — *makes Better Piping Systems*

Oxy-acetylene welding contributed to the better design and trouble-free construction of this intricate piping system. The pipe, bends, reducers, headers and flanges were all made into an integral welded unit. Every weld will remain leakproof for the life of the pipe. Welding stripped the entire system of every pound of excess dead weight and made it stronger, sturdier, more rigid—yet added not one cent of extra cost.

Tomorrow's engineers will be expected to know

how to apply this modern metalworking process to a wide range of metals—steel and iron, aluminum, copper, brass and many other alloys and metals, including platinum.

Technical booklets describing the application of the oxy-acetylene process of welding and cutting are available from any Linde office. Write to The Linde Air Products Company, Unit of Union Carbide and Carbon Corporation, 30 East 42nd Street, New York, N. Y.
